## REPORT HIGHLIGHTS

Due to COVID-19 impacts on golf in 2020, rounds played, and weather data was not collected for the month of April 2020. As a result, data comparison and calculations are in relation to April 2019 with 4-year averages from April 2016-2019.

Despite COVID restrictions in April parts of the west and the shutdown of golf in Ontario; average rounds increased significantly in all regions, especially Quebec where early openings were common in many areas. Growth in rounds in the Atlantic region was strictly in Nova Scotia, as other provinces had very few (or no) early openings.

Alberta and the Prairies had significantly more rounds due to very good weather early in the month, curtailed by a return to almost wintry conditions, and added COVID restrictions later in the month. British Columbia showed continued growth in rounds from both increased participation in golf and more frequent play by club members.
