## REPORT HIGHLIGHTS

Ontario is the shining star for the month of May showing a $140.5 \%$ increase in rounds played over May 2021. Favourable weather for the month and the partial month of golf in May 2021 due to COVID closures are the most likely reason for this strong showing in Ontario. Alberta is essentially flat over May 2021 ( $0.3 \%$ ) while British Columbia, Prairies, Quebec, and Atlantic regions are all posting declines. Cool and wet weather across much of the country had operator's weather scores for May 2022 ranging from 3.4 on the low end (Prairies) to 5.6 on the high end (Ontario). When comparing weather scores to rounds played, it is no surprise that most regions are showing a decline in average rounds over May 2021.

Although YTD results are $6.6 \%$ below 2021 levels, that still represents a gain of more than $23 \%$ over the 5 -year average.
